**PHYSICS**

**0625/61**

Paper 6 Alternative to Practical

**October/November 2015**

**1 hour**

Candidates answer on the Question Paper.

No Additional Materials are required.

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of **12** printed pages.

1 The class is investigating two different types of pendulum.

Figs. 1.1 and 1.2 show the apparatus used.

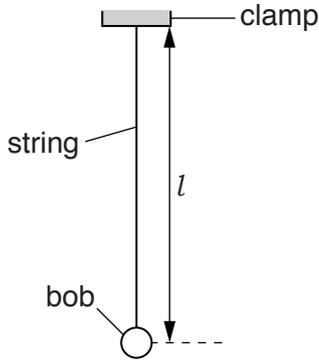

Fig. 1.1

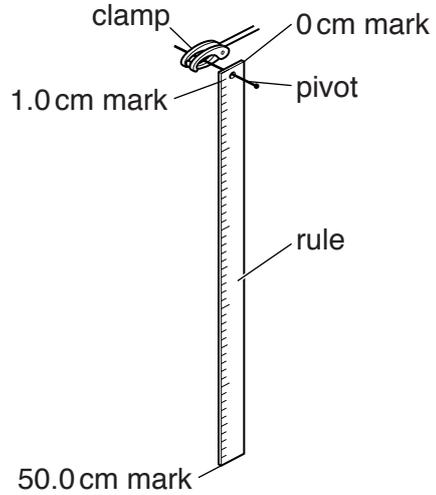

Fig. 1.2

(a) (i) On Fig. 1.1, measure the length  $l$  of the pendulum.

$l = \dots\dots\dots$ [1]

(ii) Explain briefly how you would measure the length  $l$  of a pendulum, of the type shown in Fig. 1.1, as accurately as possible.

.....  
 .....[1]

(b) A student adjusts the length  $l$  of the pendulum shown in Fig. 1.1 to be exactly 50.0 cm. She displaces the pendulum bob slightly and releases it so that it swings. She measures the time  $t_S$  for 20 complete oscillations of the pendulum.

(i) Record the time  $t_S$  as shown in Fig. 1.3.

Fig. 1.3

$t_S = \dots\dots\dots$ [1]

(ii) Calculate the period  $T_S$  of the pendulum. The period is the time for one complete oscillation.

$T_S = \dots\dots\dots$ [1]

- (iii) Explain why measuring the time for 20 oscillations, rather than for 1 oscillation, gives a more accurate value for  $T_S$ .

.....  
.....  
.....[1]

- (c) The pendulum shown in Fig. 1.2 is a 50.0 cm rule. The student displaces this pendulum slightly and releases it so that it swings. She measures the time  $t_C$  for 20 complete oscillations of the pendulum.

$t_C = \dots\dots\dots 23.2\text{s}$

- (i) State a precaution that you would take to ensure that the measurement of time  $t_C$  is reliable.

.....

- (ii) Calculate the period  $T_C$  of the pendulum. The period is the time for one complete oscillation.

$T_C = \dots\dots\dots$  [1]

- (d) A student suggests that  $T_C$  should be equal to  $T_S$ .

State whether the results support this suggestion. Justify your answer by reference to the results.

statement .....

justification .....

.....  
.....  
..... [2]

- (e) Assume that the length  $l$  of the first pendulum has been measured accurately at 50.0 cm and that the length of the strip that forms the second pendulum is exactly 50.0 cm long.

Suggest why it may not be correct to state that both pendulums have the same length  $l = 50.0$  cm.

.....  
..... [1]

[Total: 9]

2 The class is determining the resistance of a resistor.

Fig. 2.1 shows the circuit.

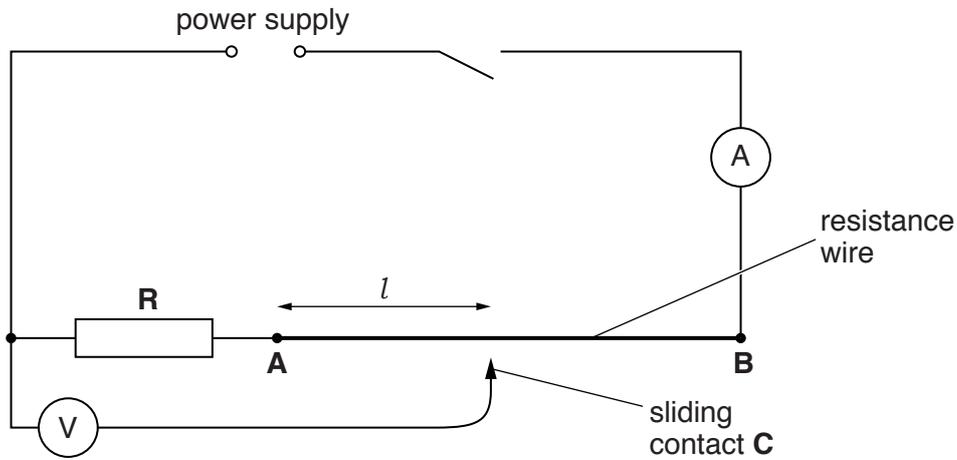

Fig. 2.1

(a) A student places the sliding contact C at a distance  $l$  from end A of the resistance wire. She records the reading on the voltmeter.

(i) Read the meter shown in Fig. 2.2. Record, in Table 2.1, this value of  $V$  for length  $l = 100\text{ cm}$ .

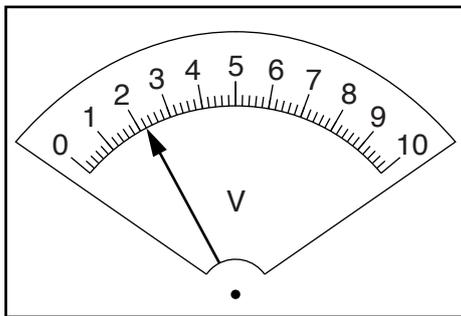

Fig. 2.2

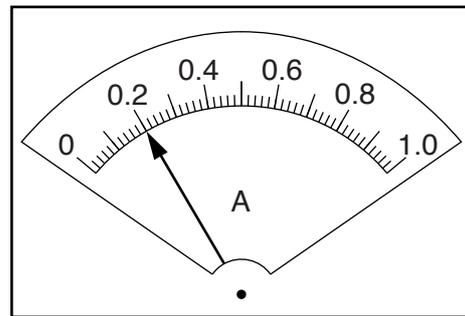

Fig. 2.3

Table 2.1

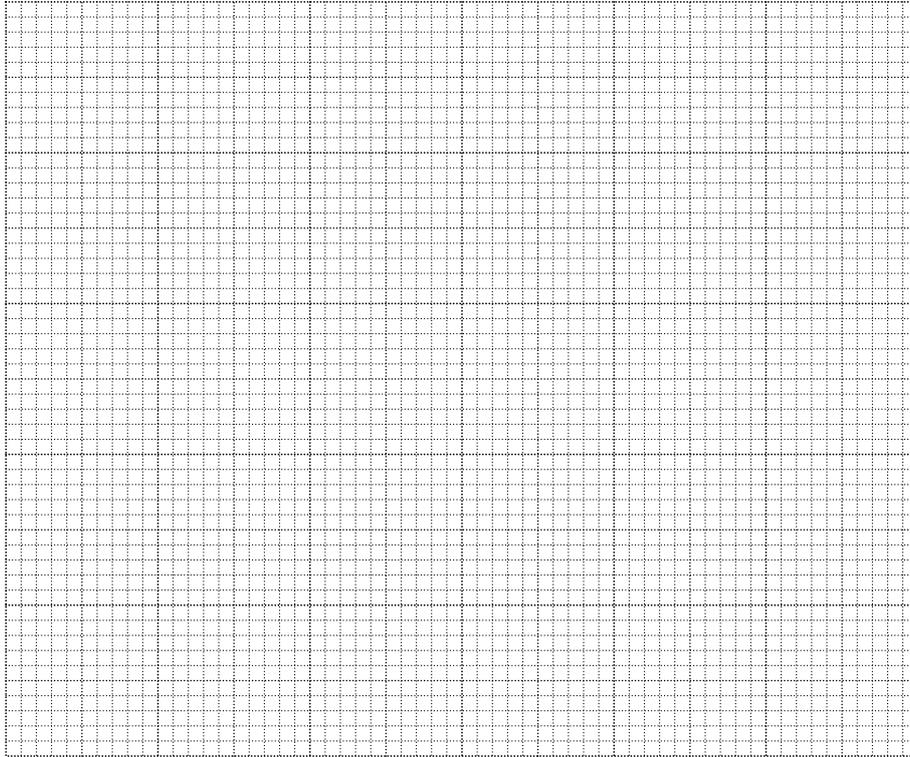

$l/\text{cm}$	$V/V$
20.0	1.1
40.0	1.4
60.0	1.6
80.0	1.9
100.0	

[1]

- (ii) Read the meter shown in Fig. 2.3. Record this current  $I$ .

$$I = \dots\dots\dots[1]$$

- (b) Plot a graph of  $V/V$  ( $y$ -axis) against  $l/\text{cm}$  ( $x$ -axis). Start both axes at the origin (0, 0).

[4]

- (c) (i) Determine the value of the intercept  $Y$  on the  $y$ -axis.

$$Y = \dots\dots\dots[1]$$

- (ii) Calculate the ratio  $\frac{Y}{I}$ . The value of  $I$  is your answer to part (a)(ii).

$$\frac{Y}{I} = \dots\dots\dots$$

- (iii)  $\frac{Y}{I}$  is numerically equal to the resistance  $R$  of the resistor **R**.

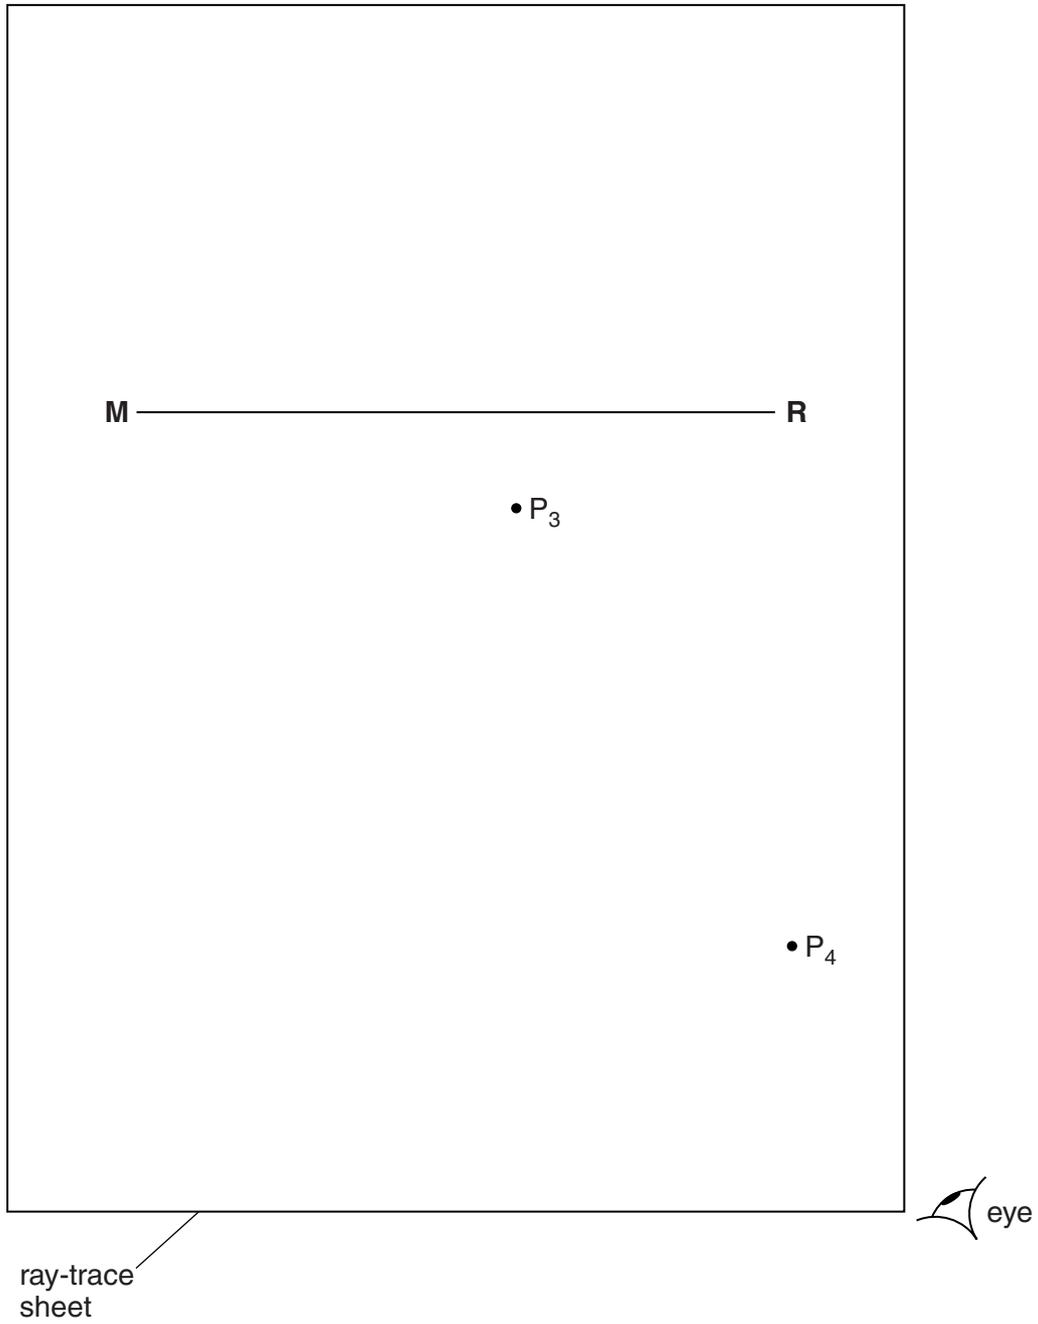

Write down a value for  $R$  to a suitable number of significant figures for this experiment. Include the unit.

$$R = \dots\dots\dots[2]$$

[Total: 9]

3 The class is investigating reflection using a plane mirror.

Fig. 3.1. shows a student's ray-trace sheet.

**Fig. 3.1**

- (a) The student draws the line **MR** to mark the position of a plane mirror.
- (i) Draw a normal to this line that passes through its centre. Label the normal **NL**. Label the point at which **NL** crosses **MR** with the letter **A**.
  - (ii) Draw a line 8.0 cm long from **A** at an angle of incidence  $i = 30^\circ$  to the normal, below **MR** and to the left of the normal. Label the end of this line **B**.

[3]

- (b) The student places a pin  $P_1$  at point **B**. He places a second pin  $P_2$  on line **AB**.

Label a position **X** on line **AB** to show a suitable position for pin  $P_2$ .

[1]

- (c) He views the images of pins  $P_1$  and  $P_2$  from the direction indicated by the eye in Fig. 3.1. He places two pins  $P_3$  and  $P_4$ , a suitable distance apart, so that pins  $P_3$  and  $P_4$ , and the images of  $P_2$  and  $P_1$ , all appear exactly one behind the other. The positions of  $P_3$  and  $P_4$  are shown in Fig. 3.1.

- (i) Draw the line joining the positions of  $P_3$  and  $P_4$ . Extend the line until it meets **NL**.

- (ii) Measure the angle  $r$  between **NL** and the line joining the positions of  $P_3$  and  $P_4$ .

$r =$  .....

[2]

- (d) State two precautions that you would take in this experiment in order to obtain reliable readings.

1. ....

.....

2. ....

.....

[2]

- (e) A student has done this experiment very carefully, taking these precautions.

She is disappointed to find that her line for the reflected ray is not exactly where she predicts from the theory.

Suggest a practical reason for this.

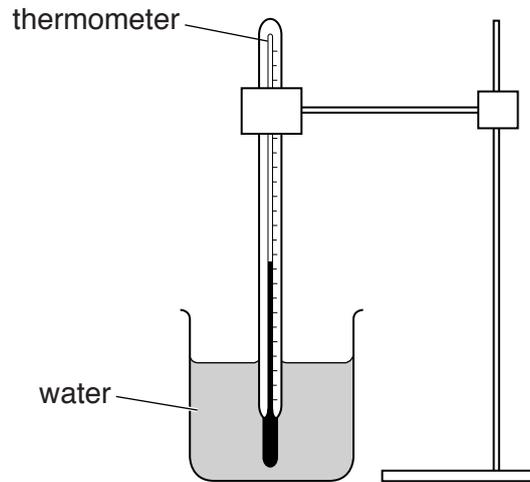

.....

..... [1]

[Total: 9]

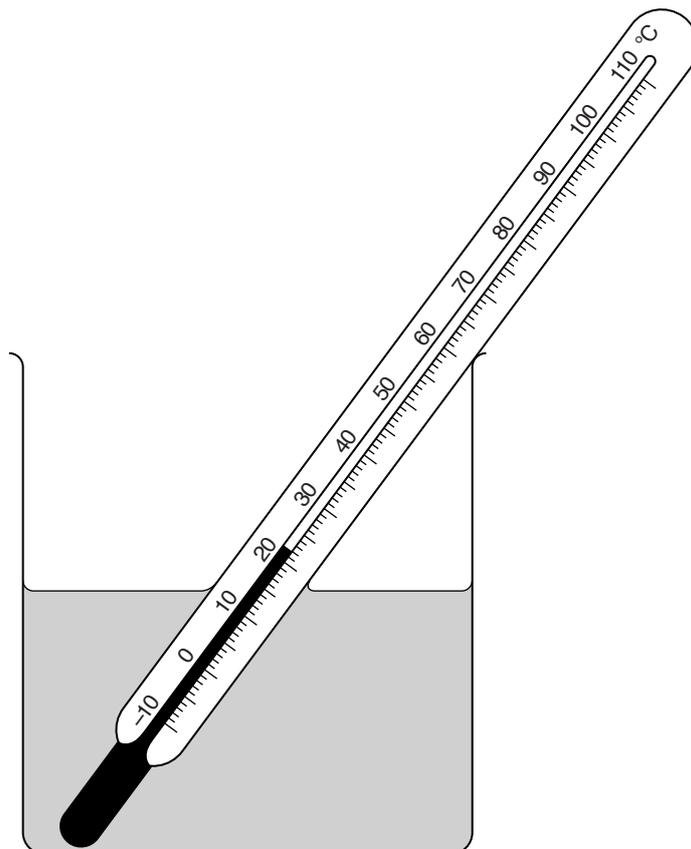

4 The class is investigating the cooling of water.

Fig. 4.1 shows the apparatus used.

**Fig. 4.1**

(a) Record the temperature  $\theta_C$  of the cold water shown on the thermometer in Fig. 4.2.

**Fig. 4.2**

$\theta_C = \dots\dots\dots [1]$

- (b) A student pours  $100\text{cm}^3$  of hot water into a beaker. He records the temperature  $\theta_H$  of the hot water in the beaker.

$$\theta_H = \dots\dots\dots 83^\circ\text{C}$$

State one precaution that you would take to ensure that the temperature reading is as reliable as possible.

.....  
 ..... [1]

- (c) The student adds  $100\text{cm}^3$  of cold water to the hot water in the beaker. He records the temperature  $\theta_M$  of the mixture.

$$\theta_M = \dots\dots\dots 46^\circ\text{C}$$

Calculate the average temperature  $\theta_A$  of the hot water and the cold water using the equation

$$\theta_A = \frac{(\theta_H + \theta_C)}{2}.$$

$$\theta_A = \dots\dots\dots [1]$$

- (d) The student carried out this experiment carefully.

He was expecting that the temperature  $\theta_M$  of the mixture would be the same as the average temperature  $\theta_A$  of the hot water and the cold water.

Suggest two factors that could cause  $\theta_M$  and  $\theta_A$  to be different.

1. ....  
 .....  
 2. ....  
 ..... [2]

(e) Fig. 4.3 shows a measuring cylinder.

Three students take the volume reading. Their readings are:

- Student 1: 80 cm<sup>3</sup>
- Student 2: 79 cm<sup>3</sup>
- Student 3: 78 cm<sup>3</sup>

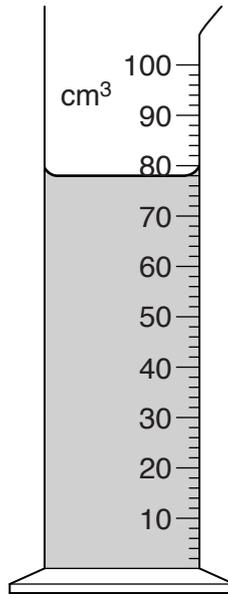

Fig. 4.3

(i) State the correct reading.

correct reading = .....

(ii) Explain briefly the mistake made by **one** of the other students.

Student ..... is incorrect, because .....

.....

[2]

[Total: 7]

5 The class is doing a lens experiment.

Fig. 5.1 shows some of the apparatus used.

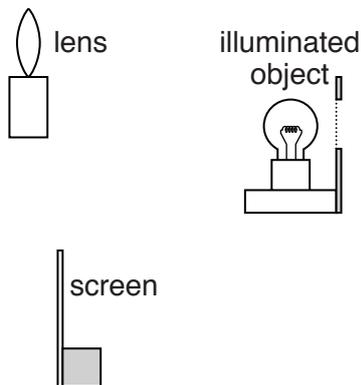

Fig. 5.1

(a) Draw a diagram to show how the apparatus shown in Fig. 5.1 is arranged for an experiment to determine the focal length of the lens. The laboratory bench is drawn for you.

[2]

(b) The focal length of the lens is known to be approximately 15 cm.

Suggest a suitable distance  $d$  between the illuminated object and the screen so that a well-focused image can be seen on the screen.

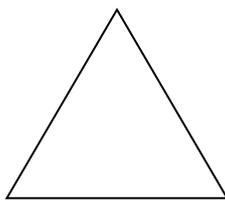

$d = \dots\dots\dots$  cm [1]

(c) Suggest two practical difficulties that may cause inaccuracy in the value of focal length obtained.

1. ....
- .....
2. ....
- .....

[2]

(d) Fig. 5.2 shows the shape of the illuminated object.

**Fig. 5.2**

In the space below, draw a diagram to show the focused image that you would expect to see on the screen. [1]
